

Copper... *The Green Choice*

It's Old. It's New. It's Copper.

In an age when renewable resources have never been more crucial, copper has long been a leader.

Copper has been used for more than 10,000 years, and it's 100% recyclable. Virtually all products made from copper can be recycled. One of the most highly-visible uses of recycled copper is copper plumbing tube. So much so that copper plumbing tube produced in Canada today is made up of more than 70% of recycled copper.

Copper tube and fittings have provided dependable service for more than 70 years, and it's estimated that over 30 billion feet have been installed in plumbing systems in houses and other buildings in North America. Contact us today for more information on copper plumbing systems.
